Dear Pieter

I would like to report back on the Unichip installation that you did to three of our Colt Rodeo V6 vehicles.

The three vehicles all covered between eight and twelve thousand kilometres since the Unichip installation. Since the installation, we noticed a remarkable improvement in engine power and torque. Although this improvement was indicated on the dynamometer report graph, we could actually feel the difference in the vehicle's performance. The engines were crispier and would clearly rev better in the upper rev ranges.

The fuel consumption on all three vehicles improved by between thirteen and twenty-eight percent. This resulted in a tremendous saving on the running cost of these vehicles. In fact, this saving has already paid for the cost of the Unichip installation.

I will recommend this modification to anybody in search of a better performing vehicle with less fuel consumption. This Unichip installation was definitely a winner on these vehicles.

Kind regards

Naas le Roux
